README

Movie Recommendation System for MOVIE101

Phase: 4 Group: 13

Group Members:

Sylvia Manono Amos Kipngetich Angela Maina Charles Ndegwa Sandra Koech Gloria Tisnanga Alex Miningwa Student Pace: Part time

Scheduled Project Review Date/Time: October 14, 2024

Instructor Name: Samuel G. Mwangi

EXECUTIVE SUMMARY

This project aims to improve Netflix's recommendation system to solve the issue of users endlessly scrolling to find content they enjoy. By enhancing the recommendation engine, Netflix seeks to provide more personalized and relevant suggestions, increasing user engagement and viewing time, while reducing decision fatigue.

DATA DESCRIPTION

There are a number of csv files available with different columns in the Data file.

movies.csv

ratings.csv

tags.csv

links.csv

Modelling

The recommendation system employs both collaborative filtering and content based filtering methods. It uses matrix factorization techniques for collaborative filtering and cosine similarity for content based filtering.

Evaluation

The system is evaluated using metrics such as Root Mean Squared Error for rating predictions accuracy.

Deployment

Deployment was done by Gradio.

Future work

Real-Time Recommendation Capabilities: Develop a real-time recommendation system that leverages live user activity and streaming data.

Advanced Modeling Techniques: Investigate the potential of using more sophisticated algorithms, such as neural network-based matrix factorization or reinforcement learning approaches, to further enhance the accuracy and personalization of recommendations.

Enhanced User Profiles: Strengthen user profiles by integrating additional data sources, such as explicit preferences and social media activity. T

Cross-Platform Consistency: Expand the system's functionality to ensure consistent performance and a seamless user experience across different devices, including mobile apps and web interfaces.

A/B Testing and Continuous Optimization: Implement A/B testing to assess different recommendation strategies and optimize the system based on real-world performance data.
